

What is WooCommerce?

WooCommerce is an **eCommerce engine** built on top of WordPress.

Think of it like this:

Website
|
WordPress
|
WooCommerce
|
Products
Orders
Customers
Coupons
Payments
Shipping
Taxes

=====

WordPress gives

- Website
- Pages
- Login
- Users
- Media

WooCommerce adds

- Products
- Orders
- Cart
- Checkout
- Payments
- Inventory
- Reports

Example

Amazon is an ecommerce website.

WooCommerce lets you build a smaller Amazon.

For example

Laptop
₹55,000

Add to Cart

Checkout

Payment

Order Created

Inventory Reduced

Invoice Generated

All this is WooCommerce.

Database

WooCommerce stores data mostly inside WordPress tables.

Example

wp_posts

wp_postmeta

wp_users

wp_usermeta

wp_terms

wp_term_relationships

wp_options

Products are actually stored as posts.

Example

Post Type = product

Order

Post Type = shop_order

=====

Plugins

Plugins are extensions.

Examples

Payment

- Razorpay
- Stripe
- PayPal

Shipping

- Shiprocket

GST

- Indian GST

Invoices

- PDF Invoice

POS

- Oliver POS
- FooSales

CRM

- HubSpot

Accounting

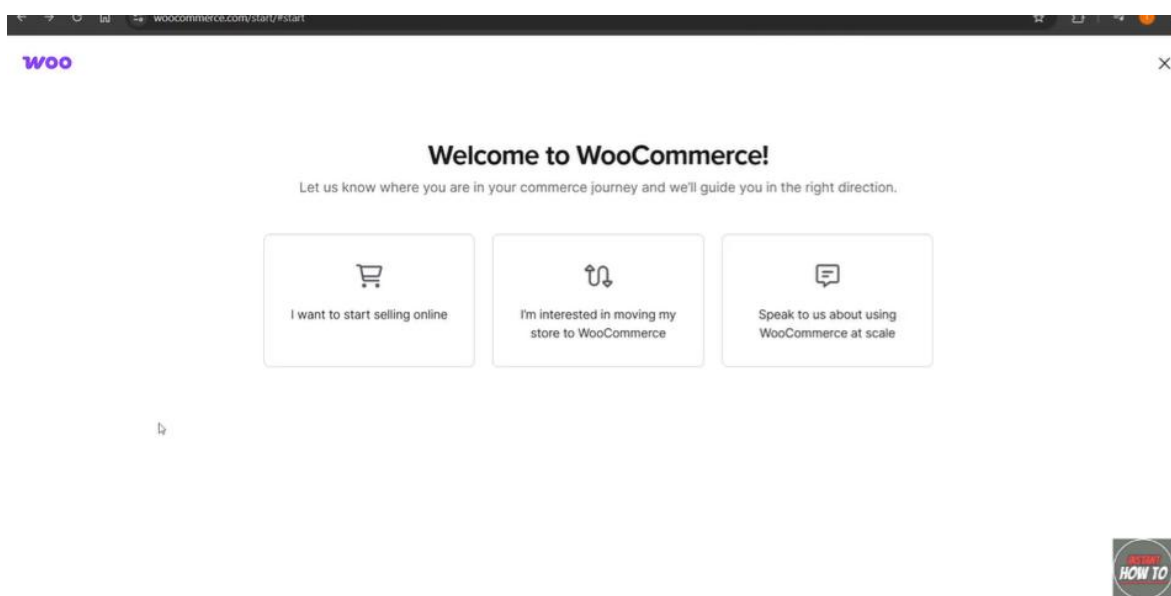

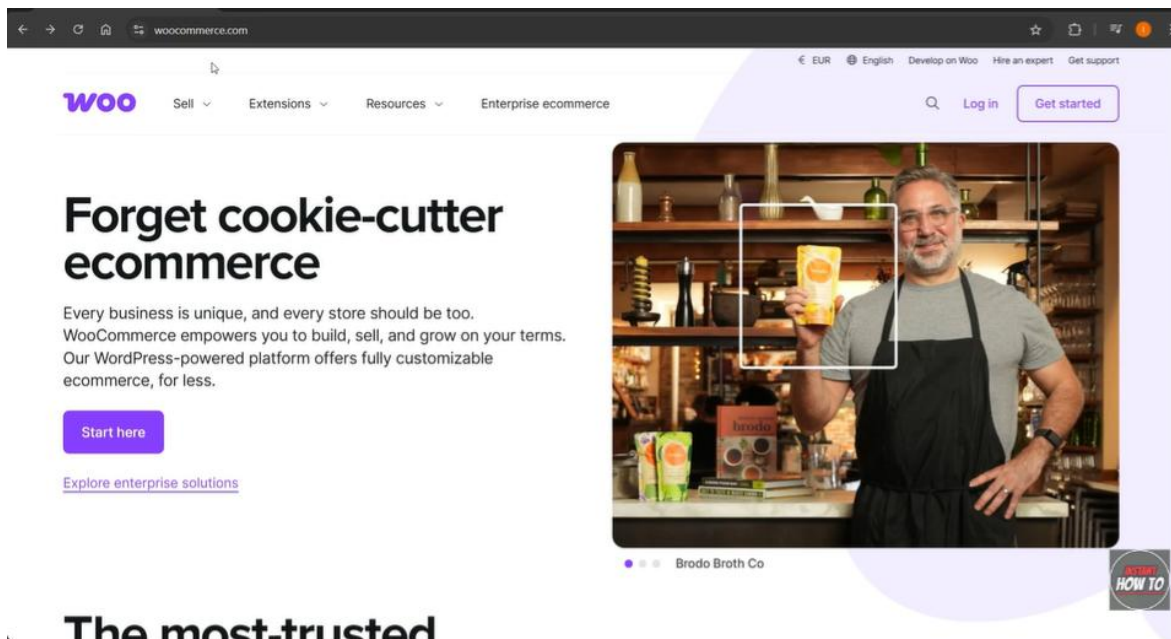

- Tally integration

• How much does WooCommerce cost?

- WooCommerce itself is:
- **Free (Open Source)**
- However, running a production store typically involves additional costs.

Item	Approximate Cost
WooCommerce	Free
WordPress	Free
Domain	₹800–₹1,500/year
Shared Hosting	₹2,000–₹8,000/year
VPS/Cloud	₹500–₹5,000+/month

Item	Approximate Cost
SSL	Often Free (or paid)
Premium Theme	₹4,000–₹8,000 one-time
Premium Plugins	₹3,000–₹30,000/year each
Payment Gateway	Usually no setup fee; transaction fees apply

WooCommerce is not the right choice for your requirements.

Your POS needs:

- ☒ Windows desktop application
- ☒ Scoop-based pricing
- ☒ Weight-based pricing
- ☒ Multiple flavour combinations
- ☒ Custom pricing rules
- ☒ Fast offline billing
- ☒ Thermal receipt printing
- ☒ Barcode scanner support
- ☒ Inventory management

While WooCommerce can handle basic POS functions, it is designed primarily for **online eCommerce**, not for a **custom desktop POS** with complex business logic like ice cream pricing.

For your project, the better choice is:

- **Frontend:** Angular + Electron (Desktop App)
- **Backend:** ASP.NET Core Web API (.NET 8)
- **Language:** C#
- **Database:** SQL Server Express/LocalDB
