

The yellow notice says:

“Reserve Bank of India requires that cards support automatic payments.”

This is due to RBI regulations for recurring payments in India. Google Cloud uses recurring billing, so it checks whether your card supports automatic payments.

What you can do

=====

Option 1: Try a different card (recommended)

Use a card that supports recurring international payments, such as:

- International Visa credit card
- Mastercard credit card
- Some international debit cards with recurring payments enabled

Many Indian debit cards do **not** support Google's billing verification.

Option 2: Ask your bank to enable

Contact your bank and ask them to enable:

- International transactions
- Recurring (e-mandate) payments
- Online payments

Then try adding the card again.

Option 3: Use another Google account

If you have another Google account that already has an active Google Cloud billing account, you can create your project there and use the API key.

Option 4: Use another payment method

If available in your country, Google Cloud may allow:

- Another credit/debit card
- Bank account (in some regions)

UPI is generally **not** supported for Google Cloud billing.
