

MATHSKEETERS

Abstract:

A Mathematical game is a game whose rules and strategy define their outcome. This event helps us to connect and build a network among the participants. This event not only has mathematics but also the fun and joy of playing the games we have played in our childhood. It contains three rounds where round 1 consists of basic math questionnaire, round 2 consists of a game of charades with mathematical terminology and round 3 consists of cups and buckets with simple math. This event exhibits teamwork and helps to build their interactive skills.

No. Of Rounds: 3

Duration of each round: Maximum 10 minutes

ROUND 1

The Participants will be given a questionnaire consisting of **20 questions** where each question is assisted with four options. Only those who have answered a minimum of required questions will be qualified for the 2nd round.

ROUND 2

The qualified members will be grouped into a **team of 8 or 4** according to the no. Of people qualified in the 1st round. Within a group, they are further divided into a group of 2 where they would be playing a game of charades. Whichever team completes this task in the **shortest period**, they will be qualified for the 3rd round.

ROUND 3

The qualified members will be grouped into a **team of 2**. This round involves cups and buckets. Here, one team member must play cup stack (4), when they complete, the other must play bucket ball, where there are some answered buckets and unanswered buckets. When they throw a ball in an answered bucket, a questionnaire will be projected where they should guess the correct question for

the answer. If they get an empty bucket, again they should play cup stack and throw a ball into the bucket till they get an answered bucket. Whichever team completes the task first, they will be declared as the winner.

INTERACTIVE SESSION: It will held during evaluation between the rounds. Questions will be asked. Winners will get the chocolates.

PROPERTIES: Paper cups-50, bins -15, cardboard container, projector, Xerox copies-280, Pens required, pin pong balls- 20(5 of same colors), chocolates – 4 boxes.
